

LEVEL 1 — Παράθυρο + κουτί

Να εμφανιστεί ένα τετράγωνο στο κέντρο του παραθύρου

WIDTH, HEIGHT = 900, 700

Rect(0, 0, 120, 120)

LEVEL 2 — Click detection

```
if event.type == pygame.MOUSEBUTTONDOWN:
    if button.collidepoint(event.pos):
        print("Clicked!")
```

if button.collidepoint(event.pos):

button είναι το pygame Object

event.pos μας φέρνει τη θέση του mouse

collidepoint → αν η θέση του mouse είναι εντός του pygame Object

LEVEL 3 — Score system and print

Αρχικοποίηση

Αύξηση

Εμφάνιση

LEVEL 4 — Timer

Αρχικοποίηση

```
start = pygame.time.get_ticks()
duration = 5
```

Αλλαγή

```
now = pygame.time.get_ticks()
elapsed = (now - start) / 1000
progress = max(0, 1 - (elapsed / duration))
```

Εμφάνιση

```
timer_text = font.render(f"{int(remaining)}", True, (255,255,255))
screen.blit(timer_text, (550,10))
```

LEVEL 5 — Timer κύκλος

```
def draw_timer(surface, center, radius, progress):  
    pygame.draw.circle(surface, (80,80,80), center, radius, 6)  
  
    start_angle = -math.pi / 2  
    end_angle = start_angle + (2 * math.pi * progress)  
  
    rect = pygame.Rect(0,0,radius*2,radius*2)  
    rect.center = center  
  
    pygame.draw.arc(surface, (0,200,255), rect, start_angle, end_angle, 12)
```

Καλούμε

```
draw_timer(screen, (WIDTH//2, HEIGHT//2), 200, progress)
```

LEVEL 7 — Rounds

```
if progress <= 0:  
    start_time = now
```

LEVEL 8 – Αλλαγή χρώματος

```
color = random.choice(["green", "red"])
```

```
if color == "green":  
    pygame.draw.rect(screen, (0,200,0), button)  
else:  
    pygame.draw.rect(screen, (200,0,0), button)
```

LEVEL 9 – Rules

```
mode = random.choice(["PRESS", "DONT_PRESS", "ALWAYS", "NEVER"])
```

```
def get_text(mode):  
    if mode == "PRESS":  
        return "ΠΑΤΑ"  
    elif mode == "DONT_PRESS":  
        return "ΜΗΝ ΠΑΤΑΣ"  
    elif mode == "ALWAYS":  
        return "ΠΑΤΑ ΟΤΙ ΚΑΙ ΝΑ ΓΙΝΕΙ"  
    else:  
        return "ΜΗΝ ΠΑΤΗΣΕΙΣ ΟΤΙ ΚΑΙ ΝΑ ΓΙΝΕΙ"
```

text = get_text(mode)

και εμφάνιση στην οθόνη

```
text_surface = font.render(text, True, (255,255,255))  
text_rect = text_surface.get_rect(center=(WIDTH//2, 80))  
screen.blit(text_surface, text_rect)
```

LEVEL 10 – Game Logic

Προσθεση η αφαιρεση ποντων

```
if mode == "PRESS":  
    score += 1  
elif mode == "DONT_PRESS":  
    score -= 1  
elif mode == "ALWAYS":  
    score += 1  
elif mode == "NEVER":  
    score -= 2
```
